Print Methods we use Pros & Cons.

Dye Sublimation onto Synthetic Fabrics and Blends.

Pros

Dye Sublimation is an excellent method used to achieve photo quality prints that are completely machine washable on a wide range of polyester fabrics. We use a true digital process whereby art work is generated with any design software such as Photoshop, Illustrator or Corel Draw.

No limit to colour.

No limit to pattern repeat length.

Print small runs as short as 5 lineal meters to do sampling.

No costly screens and positives.

Freedom to design your own art work or make use of our in-house designs.

Dye sublimation gives a very good colour fast print that penetrate the fabric.

Print cannot scratch off as it's dyed into the fibers permanently.

Polyester fabrics are very cost effective.

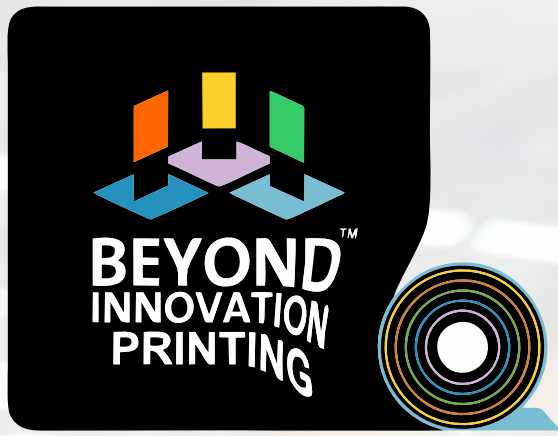

Due to the high heat transfer process at 210°C, all fabrics are pre-shrunk.

Cons

Not intended for extensive outdoor use like patio furniture. Prints placed outside in direct sunlight will start fading after about 8 months in direct sunlight.

Dye Sub Prints will last a life time indoors with no direct UV exposure.

Dye sublimation can only be done on polyester based fabrics and not natural fabrics unless we print onto a Poly/Cotton Blend. The higher the Polyester content, the better the print result. 70/30 is usually the threshold.

Please read these **important** production notes carefully to have a clear understanding of how we operate. This will assist us in providing a quality service.

Production Lead Time

If your order requires CMT, please add extra time.

For bulk orders we will require 15 to 25 work days depending on the order size. Please note that these time lines only apply to clients who have paid and all art work has been approved.

We cannot hold production slots when no art work and no payment has been received.

CMT services are reserved for orders that were not printed by us.

CMT is part of our turn-key solution to assist our clients ordering a complete product whereby we print, cut, make and trim.

Expectations

We strive for the best product and end result at all times, but it is also important to remain realistic in your expectations.

There **WILL** be a colour variance between orders placed 8 months ago and now. Colours on your monitor, tablet or phone will always appear different to the tones we see on our systems.

It is always advised to order a small 5 to 10 meter sample order to get an idea of what to expect and to see if your art work needs tweaking.

For bulk orders, we insist that you order a colour strike off to approve PRIOR to ordering bulk.

To all Mac users, please note that Mac produces a completely different colour to PC, which we use. We suggest a sample order prior to bulk if you use MAC.

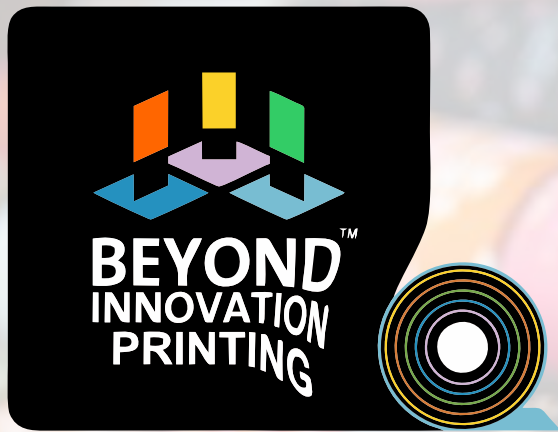

PS: We get good results on Mac users who send art work in Tiff -CMYK format.

Shrinkage

We specialize in heat transfer printing, Dye Sublimation. We transfer the design into the fabric at 210°C. This shrinks the fabric 99%, so no further shrinkage can occur during a hot or cold wash. We do however get 1.5% shrinkage over long items like tablecloths and table runners. So always add a few centimeters to your artwork just in case.

If you provide your own artwork, we cannot take responsibility for any errors derived from the artwork. Please inspect your artwork carefully.

Do not use more than 15 characters to name your art works and avoid underscores and special characters.

Artwork Set Up Guides.

Cost:

Deposit File & Adobe Stock: R750 excl per file
In-House Design Service: R750 excl per Hour
If you provide Print Ready Artwork: **No charge.**
FYI: If you sit in during Art work Design & setup, you will still be charged for time spent.

Our In-House Specifications

We achieve great results on the following format:

- .Format: Tiff. Do not use more than 12 characters when naming your files.
- .Flattened: No layers. Flatten all layers.
- .Resolution: 150 DPI. (The naked eye cannot see more than 80 dpi)
- .Colour: RGB (We print with a CMYK printer, but our software reads RGB well)
- .Size: Full size of print or tile that you want. Do not scale your artwork.

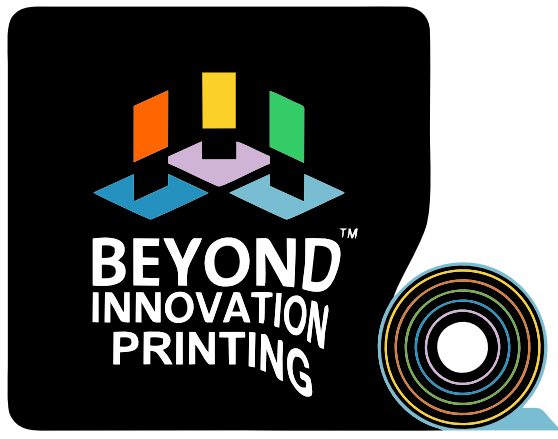

To all Mac users, please note that Mac produces a completely different colour to PC, which we use. We suggest a sample order prior to bulk if you use MAC.

PS: We get good results on Mac users who send artwork in Flattened Tiff -CMYK format IN 200 DPI.

Seamless patterns

Please insure your patterns matches on all 4 sides. The printer cannot detect artwork flaws. So if there is a repeat line in your art work, the printed will print that line. We cannot take responsibility for incorrect art work supplied to us.
